Ho Chi Minh City, Vietnam

Financial statements

For the financial period ended September 30, 2025

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

- Loading and unloading goods at river ports and seaports;
 - Other support service activities related to transportation;
 - Trading in gasoline, oil, gas and related products; trading in lubricants and engine cleaners;
 - Trading and leasing office space;
 - Trading and leasing warehouses and factories;
 - Trading and leasing transportation vehicles;
 - Supervising the installation of industrial construction equipment; supervising the installation of equipment for power line and substation projects up to 35KV.
 - Construction of electrical works.
- 4- Normal production and business cycle: within a period not exceeding 12 months. The Company's main activities are surveying, designing and constructing: surveying, designing, manufacturing, and installing drilling rig foundations, metal structures, etc.

5- Characteristics of the enterprise's operations during the financial year that affect the Financial Statements: No

6- Enterprise structure: As of September 30, 2025, the Company has 1 dependent branch, which is - Port Services Enterprise

The total number of employees of the Company as of September 30, 2025 is 936 (As of December 31, 2024: 646).

II. Accounting period, monetary unit used in accounting:

Annual accounting period: Starting from 01/01, ending on 31/12.

This financial report is prepared for the operating period from 01/01/2025 to 30/09/2025.

Monetary unit used in accounting: Vietnamese Dong (VND)

III. Applied accounting standards and regulations:

1- Applied accounting regime:

On December 22, 2014, the Ministry of Finance issued Circular No. 200/2014/TT-BTC ("Circular 200") providing guidance on the application of the accounting regime for enterprises. This Circular took effect for financial years beginning on or after January 1, 2015. Circular 200 replaced the regulations on the enterprise accounting regime issued under Decision No. 15/2006/QĐ-BTC dated March 20, 2006 of the Ministry of Finance and Circular No. 244/2009/TT-BTC dated December 31, 2009 of the Ministry of Finance.

On March 21, 2016, the Ministry of Finance issued Circular No. 53/2016/TT-BTC, which amended and supplemented certain provisions of Circular No. 200/2014/TT-BTC dated December 22, 2014. Circular 53 took effect for financial years beginning on or after January 1, 2016. The Company has applied Circular 53 in the preparation and presentation of its financial statements.

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

2- Basis for preparing financial statements

The accompanying financial statements are presented in Vietnamese Dong (VND), according to the historical cost principle and in accordance with Vietnamese accounting standards, the enterprise accounting regime and relevant legal regulations on the preparation and presentation of financial statements.

The accompanying financial statements are not intended to reflect the financial situation, business results and cash flow situation according to accounting principles and practices generally accepted in countries other than Vietnam.

IV. Applied accounting policies:

The following are the main accounting policies applied by the Company in preparing financial statements:

1- Exchange rates applied in accounting:

The Company applies the treatment of foreign exchange differences in accordance with Vietnamese Accounting Standard No. 10 (VAS 10) "The Effects of Changes in Foreign Exchange Rates" and Circular No. 53/2016/TT-BTC dated March 21, 2016 of the Ministry of Finance, which provides regulations on the recognition, measurement, and treatment of foreign exchange differences in enterprises. Accordingly, transactions in foreign currencies are translated at the exchange rates on the transaction dates. Monetary items denominated in foreign currencies as at the end of the accounting period are translated at the exchange rate on that date. Any resulting exchange differences are recognized in the income statement. Foreign exchange gains arising from the revaluation of year-end balances shall not be distributed to shareholders.

The Company mainly trades in foreign exchange-related derivatives at Lien Viet Post Joint Stock Commercial Bank (LP Bank).

2- Principles for determining the actual interest rate (effective interest rate):

The actual interest rate (effective interest rate) is used to discount cash flows for items recognized at present value based on the commercial bank interest rate at the time the enterprise borrows.

3- Principles for recognizing cash and cash equivalents:

Cash, bank deposits including cash at the fund, demand deposits, term deposits of 1 month with high liquidity, easily converted into cash and less risk related to fluctuations in value.

4- Principles of accounting for financial investments:

a, Trading securities

Trading securities are securities held by the Company for investment purposes and readily available for sale. Trading securities are recognized starting from the date of purchase and are initially measured at cost and related transaction costs of purchasing trading securities.

In subsequent accounting periods, trading securities are measured at cost less any provision for impairment of trading securities. The provision for impairment of trading securities is made in accordance with Circular No. 48/2019/TT-BTC dated August 8, 2019 of the Ministry of Finance, which provides guidance on the making and handling of provisions for devaluation of inventories, loss of

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

investments, doubtful debts, and product, goods, service, and construction work warranties at enterprises.

b, Investments held to maturity

Investments held to maturity are investments with fixed maturities and fixed or determinable payments, and the Board of Directors has the intention and ability to hold them until maturity. Investments held to maturity are recognized starting from the date of purchase and are initially measured at cost and related transaction costs of purchasing the investments. Interest income from investments held to maturity after the date of purchase is recognized on the income statement on an accrual basis. Interest earned before the Company holds is deducted from the original price at the time of purchase.

Provision for impairment of investments held to maturity is made based on the most recent financial statements that the Company collects from investees. The Company's Board of Directors believes that there are no significant changes in the financial statements of these companies compared to the most recent financial statements the Company used to determine the provision, which would have a material impact on the provision the Company has made.

c, Investments in subsidiaries and associates

Subsidiaries are companies controlled by the Company. This control is achieved when the Company has the ability to control the financial and operating policies of the investees in order to obtain benefits from the operation of these companies.

An associate is a company in which the Company has significant influence but is not a subsidiary or joint venture of the Company. Significant influence is the power to participate in decisions on the financial and operating policies of the investee but does not have control or joint control over those policies.

The Company initially recognizes investments in subsidiaries and associates at cost. The Company only recognizes as income on the income statement the amount shared from the accumulated net profit of the investee arising after the date of investment. Other amounts that the Company receives other than shared profits are considered as a recovery of investments and are recognized as a deduction from the original investment cost.

Investments in subsidiaries and associates are presented in the balance sheet at cost less any provision for impairment (if any). The provision for impairment of investments in subsidiaries and associates is made in accordance with Circular No. 48/2019/TT-BTC dated August 8, 2019 of the Ministry of Finance, which provides guidance on the making and handling of provisions for devaluation of inventories, loss of investments, doubtful debts, and product, goods, service, and construction work warranties at enterprises.

5- Accounting principles for receivables :

Receivables are amounts recoverable from customers or other parties. Receivables are presented at book value less any provision for doubtful debts.

Receivables are tracked in detail by due date, debtor, type of currency receivable, and other factors according to the Company's management needs.

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

The classification of receivables: Accounts receivable from customers, internal receivables, other receivables are performed according to the principle:

- a) Accounts receivable from customers: Are the payables and the payment status of the Company's receivables with customers for the sale of products, goods, and provision of services.
- b) Internal receivables: include receivables between the Company and its dependent branches.
- c) Other receivables include receivables that are non-commercial in nature and not related to sales transactions, such as receivables that generate financial revenue, such as receivables for deposit interest, dividends, profits to be distributed; receivables for fines, compensation,...; Expenses paid on behalf of third parties are entitled to be recovered.

When preparing financial statements, the accountant bases on the remaining term of the receivables to classify long-term and short-term debts. Customer receivables are detailed for each object, each receivable content and recorded for each payment. In detailed accounting, the accountant classifies debts, types of debts such as those paid on time, bad debts or those that are unlikely to be recovered, to have grounds and measures to handle uncollectible debts or to make provision for doubtful debts.

Provision for doubtful debts

Provision for doubtful debts is made for receivables that are overdue for payment for six months or more, or receivables that the debtor is unlikely to pay due to liquidation, bankruptcy or similar difficulties.

The accountant identifies receivables that meet the definition of monetary items denominated in foreign currencies for revaluation at the end of the period when preparing financial statements.

6- Principles for recognizing inventories:

Inventories are determined on the basis of the lower of cost and net realizable value. The cost of inventories includes direct materials costs, direct labor costs and production overheads, if any, to bring the inventories to their present location and condition. The cost of inventories is determined by the weighted average method. Net realizable value is determined as the estimated selling price less the estimated costs to complete the product together with marketing, selling and distribution costs incurred.

The Company's provision for decline in value of inventories is made in accordance with current accounting regulations. Accordingly, the Company is allowed to make provision for decline in value of obsolete, damaged, and poor quality inventories and in cases where the cost of inventories is higher than the net realizable value at the end of the accounting period.

7- Accounting principles and depreciation of fixed assets, finance leased fixed assets, investment properties, construction in progress:

Tangible fixed assets and depreciation

Tangible fixed assets are presented at cost less accumulated depreciation.

The cost of tangible fixed assets includes the purchase price and all other costs directly related to bringing the asset to a ready-to-use state.

The cost of self-made or self-constructed tangible fixed assets includes construction costs, actual production costs incurred, plus installation and trial run costs.

PETROLEUM EQUIPMENT ASSEMBLY AND METAL STRUCTURE JOINT STOCK COMPANY

No. 2 Nguyen Huu Canh Street, Rach Dua Ward,
Ho Chi Minh City, Vietnam

Financial statements

For the financial period ended September 30, 2025

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

Tangible fixed assets are depreciated using the straight-line method based on the estimated useful life, specifically as follows:

	<u>Before adjustment</u> (Number of years)	<u>After adjustment</u> (Number of years)
Houses, structures	5 - 30	5 - 50
Machinery, equipment	3 - 15	3 - 15
Transportation vehicles	6 - 10	6 - 10
Office equipment	3 - 7	3 - 7

Asset leasing

A lease is classified as a finance lease when substantially all the risks and rewards of ownership are transferred to the lessee. All other leases are classified as operating leases.

The company recognizes leased assets as its own assets at the fair value of the leased asset at the inception of the lease or at the present value of the minimum lease payments, if this value is lower. The corresponding liability to the lessor is recognized on the balance sheet as a finance lease liability. Lease payments are apportioned between finance costs and the reduction of the lease liability to ensure a constant periodic interest rate on the remaining balance of the liability. Finance lease costs are recognized in the income statement unless these costs directly form the leased asset, in which case they are capitalized according to the company's accounting policy on borrowing costs.

Finance leased assets are depreciated over the estimated useful life similar to the company's owned assets, specifically as follows:

	<u>2025</u> (Number of years)
Machinery, equipment	5 - 15
Transportation vehicles	5

Intangible fixed assets and depreciation

Intangible fixed assets represent the value of land use rights and computer software, presented at cost less accumulated depreciation.

The company has the right to use 3,570.9 m2 of land with a usage term of 32 years at No. 2, Nguyen Huu Canh, Rach Dua Ward, Hochiminh City.

Land use rights with a definite term are allocated using the straight-line method based on the land plot's usage period. Indefinite land use rights are not depreciated.

Computer software is initially recognized at purchase cost and depreciated using the straight-line method over 3 years.

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

Investment property

Investment property includes the floor areas of the 1st, 2nd, and 3rd floors of the office apartment complex at No. 2, Nguyen Huu Canh, and the house at No. 28 Nguyen Huu Canh, Rach Dua Ward, Hochiminh City, held by the company for rental income purposes. Investment property is presented at cost less accumulated depreciation. The cost of self-constructed investment property is the settlement value of the project or direct costs related to the investment property.

Investment property is depreciated using the straight-line method based on the estimated useful life over 30 years.

As of September 30, 2025, the total area of real estate currently under lease was 2,388.75 m², with an original cost of VND 21,605,271,285 and a carrying value of VND 13,020,102,996.

Construction in progress costs:

Assets under construction for production, rental, management, or any other purpose are recognized at cost. This cost includes service costs and borrowing costs related in accordance with the company's accounting policy. Depreciation of these assets is applied similarly to other assets, starting when the asset is in a ready-to-use state.

8- Principles of accounting for deferred income tax:

Deferred income tax is calculated on the differences between the book value and the tax base of assets or liabilities on the financial statements and is recognized using the balance sheet method. Deferred income tax liabilities shall be recognized for all temporary differences, while deferred income tax assets shall only be recognized when it is probable that sufficient taxable profit will be available in the future against which the temporary differences can be utilized.

Deferred income tax is determined based on the tax rates that are expected to apply to the year when the asset is recovered or the liability is settled. Deferred income tax is recognized in the income statement and is only recorded in equity when the tax relates to items that are recorded directly in equity.

Deferred income tax assets and deferred income tax liabilities shall be offset when the Company has a legally enforceable right to offset current income tax assets against current income tax liabilities and when the deferred income tax assets and deferred income tax liabilities relate to income taxes levied by the same taxation authority and the Company intends to settle its current income tax assets and liabilities on a net basis.

9- Principles of accounting for prepaid expenses:

Long-term prepaid expenses include infrastructure rental prepayments and other long-term prepaid expenses.

The infrastructure rental cost for Sao Mai – Ben Dinh Port, amounting to VND 107,135,643,174, is allocated to the income statement over the lease term of 49 years, starting from September 16, 2010.

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

Other prepaid expenses include the value of small tools, instruments, and components that have been issued for use and are considered likely to provide future economic benefits to the Company for a period of one year or more. These expenses are capitalized as long-term prepayments and are allocated to the income statement using the straight-line method in accordance with current accounting regulations.

10- Principles of accounting for payables:

Payables are recognized and presented on the financial statements when it is probable that the Company will have to use an amount of money to cover the current obligations that the Company must pay and that payable can be reliably determined.

Payables are tracked in detail according to payment term, payee, type of currency to be paid, and other factors as required by the enterprise's management.

Other payables include payables that are non-commercial and not related to the purchase or sale, supply of goods and services: payables related to financial expenses such as interest payable, dividends payable, financial investment operating expenses payable; Non-commercial payables such as payables for social insurance, health insurance, unemployment insurance, trade union funds,...

The accountant relies on the remaining term of the payables to classify them as long-term or short-term when preparing the financial statements.

When there is evidence that a loss is likely to occur, the accountant immediately recognizes a payable in accordance with the principle of prudence.

Payables that meet the definition of monetary items denominated in foreign currencies are revalued at the end of the period when preparing the financial statements.

11- Principles of recognizing borrowings and financial lease liabilities:

The Company tracks the payment term details of borrowings and financial lease liabilities. Amounts with a repayment period of more than 12 months from the financial statement date are presented as long-term borrowings and financial lease liabilities. Amounts due within the next 12 months from the financial statement date are presented as short-term borrowings and financial lease liabilities for payment planning purposes.

For financial lease liabilities, the total lease debt reflects the total amount calculated at the present value of the minimum lease payments or the fair value of the leased asset.

Borrowing costs are recognized as production and business expenses in the year they are incurred, unless they are capitalized in accordance with the Accounting Standard "Borrowing Costs." Accordingly, borrowing costs directly related to the purchase, construction, or production of assets that require a relatively long time to complete and put into use or business are included in the original cost of the asset until the asset is put into use or business. Income arising from the temporary investment of loans is recorded as a reduction of the original cost of the related asset. For separate loans used for the construction of fixed assets or investment properties, interest expenses are capitalized even if the construction period is less than 12 months.

12- Principles for recognizing payables:

Reflects amounts payable for goods and services received from sellers or provided to buyers during the reporting period but not yet paid due to insufficient documents or invoices, which are recognized in the

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

production and business expenses of the reporting period. Accrued expenses also reflect accrued interest expenses payable in the case of loans with deferred interest payments.

13- Principles and methods for recognizing provisions for liabilities:

A provision for liabilities is recognized when the following conditions are met: The company has a present obligation (legal or constructive) as a result of a past event; A decrease in economic benefits is probable, leading to a requirement to settle the obligation; A reliable estimate can be made of the value of the obligation.

The carrying amount of a provision for liabilities is the best estimate of the expenditure required to settle the present obligation at the end of the accounting period.

Provisions for liabilities are made at the time of financial reporting. If the provision for liabilities to be made in the current accounting period is greater than the provision for liabilities made in the previous accounting period that has not been fully used, the difference is recognized in the production and business expenses of that accounting period, and vice versa, if the provision for liabilities to be made in the current accounting period is less than the provision for liabilities made in the previous accounting period that has not been fully used, the difference must be reversed to reduce the production and business expenses of that accounting period.

For provisions for liabilities for construction warranty, they are made for each construction project at the time of recording the settlement of the construction project. If the provision for liabilities for construction warranty is greater than the actual costs incurred, the difference is reversed into other income.

The Company's provisions for liabilities include: Construction warranty provision; provision for severance allowance in accordance with the law; Provision for maintenance costs of apartment buildings.

Provisions for liabilities are recognized by enterprises as management expenses, except for provisions for liabilities for product warranty, which are recognized as general construction expenses.

14- Principles for recognizing unearned revenue:

Unearned revenue is recognized as the company's liability to customers when the company has received money from customers but the service has not been provided to the customer.

15- Principles for recognizing revenue and other income:

Sales revenue is recognized when all five (5) of the following conditions are met simultaneously:

- (a) The company has transferred most of the risks and rewards associated with ownership of the product or goods to the buyer;
- (b) The Company no longer holds the right to manage the goods as the owner of the goods or the right to control the goods;
- (c) Revenue is determined relatively reliably;
- (d) The Company will derive economic benefits from the sales transaction; and
- (e) The costs associated with the sales transaction can be determined.

Revenue from service provision transactions is recognized when the outcome of such transactions can be reliably determined. If a service provision transaction spans multiple periods, revenue is recognized in the period based on the proportion of work completed as of the balance sheet date of that period. The

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

outcome of a service provision transaction is determined when all four (4) of the following conditions are met:

- (a) Revenue is determined relatively reliably;
- (b) It is probable that economic benefits will be derived from the service provision transaction;
- (c) The proportion of work completed as of the balance sheet date can be determined; and
- (d) The costs incurred for the transaction and the costs to complete the service provision transaction can be determined.

Revenue from real estate transfer: For real estate that the Company sells after completing construction, revenue and cost of sales are recognized when the majority of risks and rewards associated with the real estate have been transferred to the buyer.

Revenue from the Company's construction contracts is recognized in accordance with the Company's accounting policy for construction contracts (see details below).

Interest on deposits is recognized on an accrual basis, determined based on the balance of deposit accounts and the applicable interest rates.

Interest from investments is recognized when the Company has the right to receive the interest.

Other income includes income from the Company's non-business activities, such as: Income from the sale and liquidation of fixed assets; Money received as penalties due to customer breaches of contract; Compensation received from third parties to offset losses of assets (Insurance proceeds received,...); Bonuses from customers related to product sales not included in revenue, etc.

16- Principles of accounting for cost of goods sold:

Cost of goods sold includes all costs directly related to generating revenue during the period. Cost of goods sold is recognized when the corresponding revenue is recognized.

17- Construction contracts:

Revenue and expenses of construction contracts are recognized in the following two cases:

- (a) In cases where the construction contract stipulates that the Company is paid according to the planned progress, when the outcome of the construction contract can be reliably estimated, revenue and expenses related to the contract are recognized corresponding to the proportion of work completed as determined by the Company on the financial reporting date, regardless of whether payment invoices have been prepared according to the planned progress and the amount stated on the invoice.
- (b) In cases where the construction contract stipulates that the Company is paid according to the value of the work performed, when the outcome of the construction contract can be reliably determined and is confirmed by the customer, revenue and expenses related to the contract are recognized corresponding to the proportion of work completed that is confirmed by the customer in the period and reflected on the invoice prepared.

The proportion of work completed is calculated as the percentage between the costs incurred for the completed work as of the end of the accounting period and the total estimated costs of the contract, unless these costs are not equivalent to the volume of construction and installation completed. These costs may include additional costs, compensation, and bonuses for contract performance as agreed with the customer.

NOTES TO FINANCIAL STATEMENTS

FORM NO. B 09-DN

These notes are an integral part and should be read in conjunction with the accompanying financial statements.

When the outcome of a construction contract cannot be estimated reliably, revenue shall only be recognized to the extent of contract costs incurred that are likely to be recoverable.

For real estate sales revenue of the company being the investor: It is recognized when simultaneously satisfying the following 5 (five) conditions:

- The real estate has been fully completed and handed over to the buyer, the revenue has transferred the risks and benefits associated with the ownership of the real estate to the buyer;
- The enterprise no longer retains the management rights of the real estate as the owner of the real estate or the control of the real estate.
- Revenue can be determined relatively reliably;
- The enterprise has collected or will collect economic benefits from real estate transactions;
- Costs related to real estate transactions can be determined.

18- Principles and methods for recognizing financial expenses:

All interest expenses, losses arising from the sale of foreign currencies, and exchange rate losses are recognized in the statement of profit or loss when incurred.

19- Principles for recognizing enterprise management expenses:

Enterprise management expenses are recognized in the statement of profit or loss in the period when those expenses do not bring economic benefits to the Company in subsequent operating periods.

All general management expenses of the Company such as salary expenses of company management staff, Social insurance, health insurance, unemployment insurance, trade union funds of enterprise management staff, Office supplies expenses, labor tools, depreciation of fixed assets used for enterprise management; license tax; provision for doubtful debts; outsourced services (electricity, water, telephone, fax, property insurance, fire and explosion,...); other expenses in cash (customer reception, conferences,...).

General management expenses of the Company are tracked in detail according to each expense item. All general management expenses of the Company are recognized in the statement of profit or loss when incurred.

20- Principles and methods for recognizing current corporate income tax expenses, deferred corporate income tax expenses:

Current corporate income tax expense is the amount of corporate income tax payable based on taxable income for the year and the current corporate income tax rate.

Deferred corporate income tax expense is the amount of corporate income tax that will be payable in the future arising from: Recognizing deferred tax liabilities in the year; Reversing deferred tax liabilities that have been recognized from previous years.

Do not offset current corporate income tax expenses with deferred corporate income tax expenses.

2 - Events occurring after the end of the accounting period.

3 - Presentation of assets, revenue, and business results by segment (by business line or geographical area) in accordance with accounting standard 18 "Segment Reporting" (2):

The Company's main production and business activity is construction and installation. During the period, the company did not have any other significant production and business activities; accordingly, the financial information presented on the balance sheet as of 30/09/2025 and the revenue and expenses presented on the income statement for the reporting period as of 30/09/2025 mainly relate to construction and installation activities. The company does not have any business activities outside of Vietnam; therefore, the company does not have any business segments by geographical area other than Vietnam.

4 - Other information:

Due to the impact of fluctuations in the economy, the Company's business lines are subject to risks related to market price volatility of construction materials. Significant changes in the price of construction materials can greatly affect the economic benefits and obligations of the Company. The Company's Board of Directors believes that market changes as well as the impact of the Government's macro management policies are very difficult to predict. Therefore, the Company's Board of Directors cannot quantify the impact of this issue on the Company's ongoing projects. The final result will only be determined upon completion of construction and acceptance for handover to the investors.
